

You should signal:

- At least 100 feet before you turn.
- Before every lane change.
- At least five seconds before you change lanes on a freeway.
- Before pulling next to the curb or away from the curb.
- Even when you do not see other vehicles around you.
- When you are almost through the intersection if you plan to turn shortly after crossing the intersection.

Remember to turn off your signal when you no longer need it.

Using Your Horn

Use your vehicle's horn to let other drivers know you are there or warn others of a hazard. Use your horn to:

- Avoid collisions.
- Alert oncoming traffic on narrow mountain roads where you cannot see at least 200 feet ahead.

Using Your Headlights

Your vehicle's headlights help you see what is in front of you. They also make it easier for other drivers to see your vehicle. Dim your high-beam headlights to low beams within 500 feet of a vehicle coming toward you or within 300 feet of a vehicle you are following. It is illegal to drive using only parking lights. Use your headlights:

- When it is too dark to see from 1,000 feet away.
- Beginning 30 minutes after sunset.
- Until 30 minutes before sunrise.
- In adverse weather. If you need to use your windshield wipers due to fog, rain, or snow, you must turn on your low-beam headlights.
- When conditions (such as clouds, dust, smoke, or fog) prevent you from seeing other vehicles.
- On mountain roads and tunnels (even on sunny days).
- When a road sign states that headlights must be on.
- To help other drivers see your vehicle, especially when the sun is low on the horizon.
