

Bicycle Lanes

Bicycle lanes are for bicyclists only and run alongside vehicle traffic. They are typically marked by a single solid white line and signs. They are sometimes painted bright green to make them easier to see.

It is illegal to drive in a bicycle lane unless you are:

- Parking (where permitted).
- Entering or leaving the road.
- Turning (within 200 feet of an intersection).

There are multiple types of bike lanes and markings:

- **Bike lane:** Established along streets adjacent to vehicle traffic. Typically marked by a single solid white line that turns into a dash-line near an intersection.
- **Buffered bike lane:** Uses chevrons or diagonal markings to provide greater separation from traffic and on-street parking.
- **Bike route:** Uses bike route signs and shared road markings to designate a preferred route for bicyclists on streets shared with vehicle traffic.
- **Bicycle boulevard:** Prioritizes bicycle travel on streets shared with vehicle traffic.
- **Separated bikeway:** Is physically separated from motor vehicle traffic and for exclusive use of bicyclists. They are also known as a cycle track or protected bike lanes. The separation may include flexible posts, grade separation, inflexible barriers, or on-street parking.
- **Shared roadway bicycle markings:** Alert drivers that bicyclists can occupy the lane and help bicyclists maintain a safe lane position in traffic.

NOTE: Check your blind spots before entering a bike lane. If you drive a motorized bicycle, use caution to avoid other bicyclists. Travel at a reasonable speed and do not endanger the safety of other bicyclists.

Example of shared roadway. Three (3) feet of distance must be maintained between the car and cyclist.
