

Crossing or Entering Traffic

When entering traffic from a full stop, signal and leave a large enough space to get up to the speed of traffic. To merge, enter, or exit traffic, you need a space that is:

- Half a block on city streets, which is about 150 feet.
- A full block on the highway, which is about 300 feet.

Even if you have a green light, do not start across the intersection if there are pedestrians or vehicles blocking your pathway.

When turning left, do not assume that an oncoming vehicle with its right turn signal on is turning before it reaches you. The driver may have their signal on by mistake or plan to turn just beyond you. Wait for the vehicle to start its turn before beginning the left turn.

PASSING

You must judge whether you have enough space to pass whenever you approach:

- An oncoming vehicle or bicyclist.
- A hill, curve, intersection, or road obstruction. To safely pass, the hill or curve should be at least one-third of a mile ahead.

Before you pass, look ahead for road conditions that may cause other vehicles to move into your lane.

Do not pass:

- If you are approaching a hill or curve and cannot see if other traffic is approaching. This is very dangerous on one and two lane roads.
- Within 100 feet of an intersection, bridge, tunnel, railroad crossing, or other hazardous area.
- At crossroads and driveways.
- Unless you have enough space to return to your lane.
