

PARKING

Parallel Parking

Parallel parking is when you park in line with the road and other parked vehicles. To parallel park:

- 1. Find a space.** Look for a space at least three feet longer than your vehicle. When you find a space, turn on your signal to show that you plan on parking.
- 2. Pull up alongside the vehicle in front of the space.** Leave about two feet between your vehicle and the vehicle next to you. Stop once your rear bumper is aligned with the front of your parking space. Keep your signal on.
- 3. Check your blind spots.** Look in your rearview mirror and over your shoulder for approaching vehicles and pedestrians.
- 4. Begin backing up.** Turn your steering wheel to back into the space at about a 45-degree angle.
- 5. Straighten out.** Begin turning the steering wheel away from the curb when your rear wheel is within 18 inches of the curb. You may need to pull forward and backward to straighten out. Your vehicle should now be parallel and within 18 inches of the curb.

Turn off your vehicle and set the parking brake. Before you exit your vehicle, look carefully for passing vehicles, bicycles, and motorcycles. Exit when safe.
