

Exiting the Roundabout

- Once you have entered the roundabout, proceed counterclockwise to your exit. You now have the right-of-way.
- As you approach your exit, turn on your right turn signal.
- Exit the roundabout, yielding to pedestrians in the crosswalk.

Pedestrians

- Stay on the designated walkways at all times.
- Cross only at the designated crosswalks.
- Never cross to the central island.
- Watch for cars; you have the right-of-way, but your best protection is your own attention.
- Cross the crosswalk one lane at a time, using the splitter island as a refuge area before crossing the next lane

Bicyclists

- If you are comfortable riding in traffic, take the lane and circulate like you are a vehicle, making sure you yield to traffic in the circle when entering.
- Ride at the speed of the circular roadway to discourage cars from passing you.
- When you exit the roundabout, use your right hand signal.
- If you are unsure about using the roundabout, dismount and walk your bike as a pedestrian at the designated crosswalks.

For more information about Roundabouts, please visit the New York State Department of Transportation website at <https://www.dot.ny.gov> and search for Roundabouts.

DROWSY AND FATIGUED DRIVING

Driving and sleep do not mix. When you are behind the wheel of a car or truck, fatigue is dangerous. If you are tired when driving you are slower to react, and not as aware as you should be and your judgment will be impaired. As with drugs and alcohol, drowsiness can contribute to a traffic crash.

Symptoms of Fatigue

Researchers have found the following symptoms to be associated with drowsy driving:

- Your eyes close or go out of focus by themselves.
- You find it difficult to keep your head up.
- You continue to yawn.
- Your thoughts wander and are disconnected.
- You do not remember driving the last few miles.
- You drift between lanes, tailgate or miss traffic signs.
- You must jerk the car back into the lane.
- You have drifted off the road and hit the rumble strips, which produce a loud noise and vibrations.

Who is Most at Risk? All Drivers who are:

- Deprived of sleep or fatigued.
- Driving long distances without rest breaks.
- Driving through the night or at times when you are normally asleep.
- Taking medication that increases sleepiness or drinking alcohol.
- Driving alone.
- Driving on long, rural, or boring roads.
- Frequent travelers, e.g., business travelers and long-distance commuters.
- Young People – Drowsy driving crashes are
