

Channelizing Devices

Barricades, vertical panels, drums, cones, and tubes are the most commonly used devices to alert drivers of unusual or potentially dangerous conditions in highway and street work areas, and to guide drivers safely through the work zone. At night channelizing devices are often equipped with flashing or steady burn lights.

When you encounter any type of channelizing device:

1. Slow down and prepare to change lanes when it is safe to do so.
2. Be prepared for drivers who wait until the last second to move to the open lane.
3. Maintain reduced speed until you clear the construction area. There should be a sign indicating you are leaving the construction area.
4. Return to the normal driving lane only after checking traffic behind you.

Passing Traffic

The diagonal stripes on the barricade or vertical panel guide the driver towards the direction to where the traffic is to pass.

Pass to the Right

Stripes sloping downward to the right means the driver should bear to the right.

Pass to the Left

Stripes sloping downward to the left means the driver should bear to the left.

Flashing Arrow Panels

Large flashing or sequencing arrow panels may be used in work zones day and night to guide drivers into certain traffic lanes and to inform them part of the road ahead is closed.

Flag Person

A flag person is often provided in roadway work zones to stop, slow, or guide traffic safely through the area. A flag person wears an orange vest, shirt, or jacket and uses stop/slow paddles or red flags to direct traffic through work zones.

1. A flag person is used in cases of extreme hazard.
2. A flag person's instructions must be obeyed.
3. When instructed to stop, do so in your lane and do not veer right or left.
4. Do not attempt to go forward until the flag person instructs you to do so.
5. Proceed with caution, expect the unexpected.
6. Always be on the lookout for oncoming vehicles in your lane of traffic.

Automated Flagger Assistance Device (AFAD)

An automated flagger assistance device (AFAD) is used to control road users through temporary traffic zones. An AFAD is designed to be remotely operated, allowing a flag person to be positioned out of the lane of traffic. Temporary traffic control in roadway work zones can also include pilot/escort vehicles, advanced warning signs, or temporary traffic signals.
