

### How to Pass on a Two-Lane Road

1. Keep enough distance between you and the car in front of you so you can see ahead clearly. Check the rearview mirror, your side mirrors, and look over your shoulder in your blind spot to make sure the roadway is clear and no other vehicles are passing you. Turn on your left turn signal to alert any drivers behind you.
2. Check well ahead for signs and pavement markings for no passing zones, and always check for oncoming traffic in the left lane. Be sure you have enough time and space to overtake the car ahead and return to the right lane before an approaching car comes within 200 feet of you.
3. Tap your horn when necessary to alert the driver ahead.
4. Pass on the left and do not return to the right lane until you have safely cleared the overtaken vehicle. Wait until you can see the car you have just passed in your rearview mirror before returning to the right lane.
5. Turn on your right turn signal and return to the right lane. Be sure to turn your signal off after you have completed the lane change.

### Passing on the Right

In Texas, you can pass on the right only when conditions permit you to do so safely.

1. The road is clear of parked vehicles or other lane obstructions and is wide enough for two or more lanes in each direction.
2. You are on a one-way road.
3. You may pass on a paved shoulder when the vehicle you are passing is slowing or stopped on the main traveled portion of the highway, disabled, or preparing to make a left turn.

Do not pass on the right by driving off the paved portion of the highway.

### When Another Vehicle is Passing

1. Do not increase your speed.
2. Stay in your lane.
3. Safely move as far to the right as you can when being passed on the left and the lanes are not marked.
4. Make it as safe and easy as possible for the other driver to pass you.

### Blind Spot Driving

When you are passing, do not drive or linger in the other driver's blind spot. Either pass the other driver or slow down so you are not in another driver's blind spot. It is likely the other driver cannot see you if you are in or near their blind spot.

## Turning

Turning a corner appears to be a simple operation. However, many crashes and confusion in traffic are caused by drivers who do not turn properly.

Refer to the diagrams showing the correct method of making right and left turns. There are seven steps in making a safe turn.

1. Decide before you get to the turning point. Never make a last minute turn; it is dangerous.
2. Look behind and to both sides to see where other vehicles are before you change lanes.
3. Move into the proper lane as soon as possible. The faster the traffic is moving, the sooner you should move into the proper lane. If you cannot get into the proper lane within one-half block before turning, do not turn, and continue straight ahead.
