

Observe Specific Instructions

Observe specific instructions indicating the lane you should drive in.

Once You are in the Proper Lane

1. Stay in the middle of your lane.
2. Do not weave in and out of traffic.
3. Maintain a constant speed. Keep pace with the traffic. Don't speed up and slow down unnecessarily.
4. Stay at least two seconds behind the vehicle ahead of you. In bad weather, increase the time to at least four seconds. Watch the cars ahead of you. Be prepared if one of the cars ahead of you stops suddenly.
5. Adjust your speed to allow others to enter the highway safely.
6. Vehicles in any lane, except the right lane used for slower traffic, should be prepared to move to another lane to allow faster traffic to pass.

**Leaving the Highway**

1. Move into the proper lane well in advance of the exit. The greater the amount of traffic, the earlier you should move into the proper lane. Exit signs are usually placed at least 1,000 yards ahead of the exit.
2. Slow down on the exit ramp so by the time you are off the highway, you are within the new, slower speed limit.

Fight Highway Hypnosis

A condition of drowsiness or unawareness can be brought on by reduced activity and steady sounds of wind, engine, and tire hum. This is known as highway hypnosis. All drivers should be aware of its danger and of the methods for fighting it.

1. Stop often. Even if you are feeling well, you should stop at least every two hours or every 100 miles. Get out of your car and walk around. Allow your muscles to relax.
2. Do not drive more than eight hours per day.
3. Keep shifting your eyes. Look at different objects; near and far, left and right. Read the road signs as you approach them. Check your rearview mirror.

Highway Safety Tips

1. Keep a window open so there is always fresh air in the car to help keep you alert and awake.
2. On bright days, wear good sunglasses. Never wear sunglasses at night.
3. Stay out of another driver's blind spot. Traveling where the driver ahead of you cannot see your vehicle can be dangerous. Stay behind or go around the other vehicle. Do not follow to the side.
4. Avoid using a cell phone while driving; use may cause distraction and driver inattention. If you must use a cell phone, safely pull off the road or use a hands-free headset. If you are under 18 years of age, it is illegal to use a cell phone while driving even if it is a hands-free device except in the case of emergency.

Vehicle Breakdown

1. If you can't get the car off the road, get everyone out of the car and off the road. Portable warning devices should be used to warn oncoming traffic.
2. Move your car off the pavement to the side of the road. A car with a flat tire or blowout can be driven slowly off the road.
3. Turn on your emergency warning lights. If you do not have warning lights, use your taillights. At night, in addition to your taillights and warning lights, turn the lights on inside of the car.
4. Tie a white cloth to your radio antenna, door handle, or some other place where it may be easily seen. If you do not have a white cloth, raise your hood.

Controlling a Car in Special Situations

There is one basic rule which applies in all driving situations, **think** before you **act**.

Steering Out of a Skid

An automobile skids when its tires lose their grip on the road surface. If the car starts to skid, follow these safety tips.

1. Do not hit the brakes suddenly and hard. Take your foot off the gas pedal (accelerator).
2. Turn your steering wheel in the direction of the skid. As you recover control, gently straighten the wheels.
