

ONE-HAND STEERING

Use one-hand steering when backing or operating vehicle controls (wipers, flashers, lights, etc.) that require you to reach from the steering wheel.

The placement of one hand on the steering wheel is critical to vehicle balance and controlled steering when in reverse.

The 12 position is recommended only when backing a vehicle. In this situation, turn your body to see the path of travel behind you.

2.8 | BRAKING

Good vehicle handling depends on your ability to accurately and smoothly manage speed and space at all times.

BRAKING PRESSURE

Determining the amount of braking pressure you need is an important skill. It will develop as you practice and get more familiar with the vehicle you drive. There are four levels of braking:

1. Light
2. Medium
3. Firm
4. Emergency
