

Automated traffic safety cameras

These cameras automatically record images if you:

- Fail to stop at a steady red light.
- Fail to stop at a railroad crossing signal.
- Exceed the speed limit in a school zone.

All locations with traffic cameras are clearly marked. Speeding tickets from these locations are mailed to the vehicle owner.

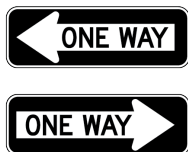

Speed warning

These signs indicate that a speed change is recommended for a potential hazard or road condition (often a curve or turn). Adjust your speed appropriately given all factors (road, weather, traffic, etc.) and follow the speed warning limit.

Variable speed limit and advanced notification

These digital signs attempt to distribute the flow of traffic by posting changing speed limits. Digital advanced notification signs can also quickly close entire lanes and provide warning information to drivers before they reach slower traffic.

One Way

These signs identify where traffic flows only in the direction of the arrow. Never drive the wrong way on a one-way street.
