

5.7 | VEHICLE FAILURES

If you have vehicle troubles on the road, remember these tips:

- Get your vehicle off the road and away from traffic, if possible.
- Stop where other drivers have a clear view of your vehicle, especially if you can't get your vehicle off the road. Avoid stopping just over a hill or around a curve.
- Turn on your emergency flashers and headlights.
- Warn other road users by placing emergency flares 200 to 300 feet behind the vehicle.
- Stand somewhere safe, and wave traffic around your vehicle if you don't have emergency flares or another warning device.
- Lift the hood or tie a white cloth to the antenna, side mirror, or door handle to signal an emergency.

TIRES

If a tire blows out or suddenly goes flat:

- Grip the steering wheel firmly and keep the vehicle going straight.
- Slow down gradually. Take your foot off the accelerator.
- Do not brake. Allow the vehicle to slow by itself, or brake gently if necessary.
- Pull off the road in a safe place, if possible, and turn on emergency flashers. If you can't get to a safe place to change your tire, turn on your hazard warning lights, stay in your vehicle, and call for help.
- Have the tire repaired or replaced.
