

5.9 | COLLISIONS

All drivers eventually will find themselves in an emergency situation. As careful as you are, there are situations that could cause problems for you. All drivers have the responsibility to prevent crashes. Sometimes this will require you to use evasive maneuvers, but a basic understanding of the laws of physics can also help you avoid crashing. No matter how well you drive, you can still become involved in a collision.

Collisions typically have three causes:

1. Too much speed
2. Too little space
3. Insufficient situational awareness.

CRASHING A VEHICLE

- Do not drive away. If anyone is injured or killed, call 911. Law enforcement must be notified.
- Move the vehicle to the side of the road, but near the collision site, as soon as possible.
- Don't stand or walk in traffic lanes. You could be struck by another vehicle.
